

Linear Split Pane

Innovative, stylish and modern

Linear Split Pane

Our Linear fireplaces offer you innovation and beauty rolled into one. The Linear Split Pane (SP) is a sleek linear-style wood-burning fireplace providing an uninterrupted 50" wide, wall-to-wall fire-viewing area.

It takes its name from the finely crafted glass view which is set inside a three inch deep, 1/4" steel lintel. Unlike our Linear 50, which has a guillotine style glass door, the glass of the Linear Split Pane is divided into three panes. There is a fixed panel on either side of the centrally located door which opens discreetly on a hidden hinge. Normally a fireplace with a viewing area this large requires a 10" chimney, but this unit has a hidden secret –

it requires a chimney 36% smaller. Much like a funnel will overflow if too much water is poured in, so too, will smoke spill out of a chimney that is too small. The clever door design offers a solution to the quintessential problem of big fireplaces requiring big chimneys in order to work well. The Linear SP provides the viewing space of a massive fireplace, but offers the door size of a woodstove.

This brilliantly engineered fireplace makes installation easier, reduces overall cost and offers the much sought-after contemporary styling homeowners are looking for in a large fireplace.

Innovative, stylish and modern

- Finely crafted split glass pane with a small centrally located hinged door
- 3" deep, 1/4" steel lintel
- Large 44 1/2" wide firebox
- Can be installed with 8" or 10" chimney
- Heat Recovery System (HRS) uses ducts to distribute heat throughout the home
- Defined as a fireplace by the 2015 NSPS particulate emissions standards
